EDUCATION

NC STATE UNIVERSITY

Expected December 2026

Bachelor of Science in Computer Science; Minor in Brewing Science and Technology

Cumulative GPA: 4.0 | Dean's List 2022-Present

EXPERIENCE

CLINISYS

Software Development Intern

Summer 2026

- Developed new client facing service for Clinisys' existing flagship lab management platform, orchestrating Playwright automation scripts to reduce manual validation effort.
- Designed and implemented database schema and API endpoints to record automation run entries, parameters, and result artifacts to a dedicated results table.
- Collaborated cross-functionally on a full-stack prototype (frontend UI, backend API, Playwright automation layer), contributing to overall design while focusing on the backend.
- Built an Azure DevOps extension that retrieves 16,000+ user stories, applies a text matching algorithm, and suggests the most relevant parent user story for new bug reports.

SPORTSMEDIA TECHNOLOGY (SMT)

Quality Assurance Intern

June – November 2025

- Evaluated multipurpose broadcast software that manages live game data and on-screen graphics for customers like NBC, Amazon, NHL, NFL, and more.
- Contributed as an analyst on the Broadcast QA team by examining functionality, graphics, and animations through manual testing, logging bugs, and working with developers.

NCSU WOLFPACK MOTORSPORTS BAJA SAE TEAM

Ergonomics/Composites Lead and Suspension Co-Lead

August 2022 – August 2024

- Mentored and directed incoming club members on technical projects while serving on the leadership team responsible for car design and competition strategy decisions.
- Designed and fabricated carbon fiber composite parts (steering wheel, seat, all body panels).
- Assisted suspension component design to achieve desired geometry goals including a larger roll moment, increased droop, decreased turn radius, and more.

SIEMENS

Mechanical Design Engineer Intern

Summer 2024

- Worked alongside the Retrofit R&D team, contributing to ongoing customer projects.
- Prepared samples for certification tests and discussed design decisions for improvement.

PROJECTS/SKILLS

Pack Pixels Web Application (*HTML, CSS, JavaScript, Docker*)

- Web-based app providing server-hosted photo storage, filter effects, and file sharing.
- Developed REST API routes backed by a MariaDB database, core backend services, and frontend page for applying filter effects on a photo.
- Developed for a final project in a Web Development course with a small team.

Multifunctional Bot (*Python*)

- Created custom Discord bot with functions including: Play music through voice channel; Report recent game performance of friend's account; Notify of new comic chapter releases.

Personal Photography Website (*React, GitHub Actions*) [Link](#)

- Developed a website using the React framework for displaying my photography and resume.
- Incorporated GitHub Actions to automate building source code when image files are changed.

Other Technical Skills:

- Java, C#, .NET, C, JUnit, Git, Ansible, GitHub Actions
