EDUCATION

NC STATE UNIVERSITY

Expected December 2026

Bachelor of Science in Computer Science; Minor in Brewing Science and Technology

Cumulative GPA: 4.0 | Dean's List 2022-Present

EXPERIENCE

CLINISYS

Software Development Intern

Summer 2026

- Built a client-facing service that orchestrates Playwright automation for Clinisys' flagship lab management platform, reducing manual validation time of new test procedures by ~65-85%.
- Designed a database schema and REST API endpoints for persisting automation runs, input parameters, and results artifacts.
- Collaborated cross-functionally on a full-stack prototype (frontend UI, backend API, Playwright automation layer), contributing to overall design while focusing on the backend.
- Built an Azure DevOps extension to analyze 16,000+ user stories using text similarity to recommend parent stories for newly logged bugs.

SPORTSMEDIA TECHNOLOGY (SMT)

Quality Assurance Intern

June – November 2025

- Performed functional and regression testing of live broadcast software used to manage real-time game data and graphics for NBC, Amazon, the NHL, and the NFL.
- Reproduced technical issues with clear documentation and collaborated with developers through resolution.

NCSU WOLFPACK MOTORSPORTS BAJA SAE TEAM

Ergonomics/Composites Lead and Suspension Co-Lead

August 2022 – August 2024

- Mentored and directed incoming club members on technical projects while serving on the leadership team responsible for car design and competition strategy decisions.
- Designed and fabricated carbon fiber composite parts (steering wheel, seat, all body panels).
- Assisted suspension component design to achieve desired geometry goals including a larger roll moment, increased droop, decreased turn radius, and more.

SIEMENS

Mechanical Design Engineer Intern

Summer 2024

- Assisted the Retrofit R&D team with producing new customer products for third-party certification, ensuring high build quality to accurately represent the design.

PROJECTS/SKILLS

Pack Pixels Web Application (*HTML, CSS, JavaScript, Docker*)

- Built a containerized full-stack photo management application with JavaScript, MariaDB, and Docker, supporting server-hosted image storage, file sharing, and filter effects.
- Designed REST API routes and database-backed backend services and implemented the frontend image-filtering workflow

Multifunctional Bot (*Python*)

- Engineered an async, multifunctional Discord bot integrating Riot Games' REST API for player stats, FFmpeg for voice-channel audio streaming, and web scraping for comic release alerts.

Personal Photography Website (*React, GitHub Actions*) [Link](#)

- Developed a website using the React framework for displaying my photography and resume.
- Incorporated GitHub Actions to automate building source code when image files are changed.

Other Technical Skills:

- Java, C#, JavaScript/TypeScript, React, Docker, .NET, C, JUnit, Git, Ansible, GitHub Actions
